You can learn more about regional and programmatic requirements in our accreditation guide. All You Need to Know About Accreditation What Kind of Licensure or Certification Do You Need? To practice in a regulated field like psychology, professionals usually need board certification or licensure. Licensure is done at the state level and usually requires the appropriate degree, supervised clinical experience, and a passing score on state licensing exam. Requirements vary, but most counselors need a master's degree. However, some counselors can qualify for board certification with a bachelor's degree. Substance abuse counselors typically need both board certification and licensure, while school counselors may only need one, depending on the state. Psychologists usually need a doctoral degree and state licensure to practice, but industrial-organizational psychologists typically need only a master's degree and licensure. Each state has its own licensing requirements, but some states offer reciprocity agreements that allow professionals to practice in other states. For experienced professionals, the American Board of Professional Psychology also offers board certifications for specializations. Both certifications and licenses expire every 2-5 years and must be maintained through continuing education credits. What Can You Do With a Psychology Degree? What Can You Do With a Psychology Degree? Featured Online Bachelor's in Family Counseling Advice From a Psychology Graduate Of all the advice available to prospective students, guidance from someone in the field may be the most beneficial. The interview below, from a former psychology graduate, explores the required training, the profession in general, and things all students should know. What degrees and licenses in psychology do you hold? What did you specialize in? In psychology, I hold an undergraduate degree in psychology and a postgraduate degree from South Africa. I am presently pursuing a master's degree in psychology. In 2018, I completed my undergraduate BSC degree, majoring in psychology and biochemistry, from Wits University. In 2020, I completed a postgraduate BA honors degree in psychology (UNISA). My postgraduate discipline is clinical psychology, but for my master's I am pursuing research in the field of child development. What do you do for a career now? Currently, I work as an editorial assistant at Autism Parenting Magazine. Previously, I worked as an education facilitator at both neurotypical and neurodivergent schools. I initially wanted to pursue a career as a clinical psychologist, but I later realized that I was not cut out for it. I have since moved into a career in writing, where I have been able to combine my passion for psychology with my writing skills. I have also been able to gain valuable experience from my case studies to the various theories that encompass psychology – as long as you stay on top of your work, stay organized, and find a study group, you should be fine! The field of psychology is so popular and the entry pool is large, so expect competition and aim to chart on the top achiever's list. Most of all, if you're unsure of which discipline in psychology to pursue, don't fret! Most of us didn't know until the third year. Even then, your interest may change. But while you're at it, give it your best and enjoy the journey. What degree do you recommend for people interested in an entry-level career in psychology? I would recommend that you do your research! I believe that knowing your strengths and weaknesses will help you get an idea of where you would thrive most. For instance, if you'd like to help clients through therapy, perhaps clinical psychology is your route. Or if you would like to work in organizations, then organizational psychology is the route for you, and so on. For example, early on in my undergraduate studies, I was always fascinated by clinical psychology because of the depictions of psychologists portrayed on television. As I progressed into my postgraduate studies and realized my talent for writing and research, I became drawn to research psychology. An important note to consider is that specialization in psychology takes place at postgraduate level. In

undergraduate level, you're really just learning their career or you progress. What degree do you need to inform your journey as you progress. There's no rule book that says you can't press restart on your career or advance the one you're currently at. I've met a few individuals who were successful in other career paths, such as lawyers or designers, who left their safety nets to go back and pursue psychology. I mention this because I want people pursuing psychology to know that you may not have started a career in psychology right after high school, but that doesn't mean you can't press restart. If you're in a situation where you'd like to advance your postgraduate career in psychology – such as a master's or Ph.D. – go for it! The rewards are endless (just like in any degree). What do you wish you knew before you started your pursuit of a psychology degree – and career? I wish I knew that my journey would not be straightforward. In medicine, by the end of your final year, you know that you will be a medical doctor and begin practicing. By contrast, in psychology, you have to increase in levels. From your undergraduate degree, you have to apply to enter into postgraduate studies. Even at postgraduate level, you have to apply for entry into a master's or doctorate program. Let's not even get into the chat about career. A career in psychology is challenging. Most employers seek a psychologist with a master's qualification in psychology. That means that even though you have a four-year degree in psychology or an honors degree in psychology, you're not a psychologist until you've obtained your master's degree AND passed the board exam to be a certified psychologist. So when I say prepare for a LONG journey, I don't say it half-heartedly. Some people are privileged to get into internship programs that help to boost their practical experience portfolios. But if that's not you, I would recommend doing community service to help you boost your portfolio. If I can give you a top secret: At master's level, they want to know about that portfolio, because that practical experience tells the review board whether you can survive the emotional and physical demands of the career you're entering. What assumption do people have about psychology that you'd like to correct? "Psychology majors can read your mind and diagnose mental illness." No way! Even board-certified psychologists can't read minds. Psychology is not the ability to read minds and figure out your experiences for you. A psychologist can learn about human behavior, learn about diagnostic illnesses, and learn how to diagnose them, but that applies to knowledge, not the ability to know what's in your head. Through the knowledge we gain, we can make conclusions based on the guidelines provided. But at the end of the day, we're just humans with the knowledge to do what we do in practice. "Every psychologist is a counselor." I can't tell you the number of times someone has said, "oh, you're a counselor," when I told them that I am pursuing a career in psychology. Psychology is so diverse and has many disciplines, but somehow television has portrayed psychologists as counselors in an office on a couch that just listen to your problems. Featured Online Bachelor's in Mental Health Counseling Popular Questions About Psychology Degrees Is a Psychologist a Medical Doctor? No. Psychologists do not have formal medical training and are not doctors. Psychologists are sometimes confused with psychiatrists, who do attend medical school. Does a Psychology Degree Pay Well? Yes, psychology degrees can lead to well-paying careers. For example, psychologists make median annual wages of \$81,180. The top 10% of earners in the field make more than \$137,590. How Many Years Will It Take to Be a Psychologist? Psychology students spend 9-13 years in higher education, depending on their chosen pathway. Most psychologists have a doctorate – either a Ph.D. or a Psy.D. – and those programs typically take 4-7 years, after earning a bachelor's.
